01. Purpose

The purpose of this Bookstack instance is to expose the hardware companies that basically run the whole technology industry. These are the companies that actually make the hardware that consumers and datacenters are using to run all the applications we use every day of our lives. Yes, it is a great oligopolisitc and monopolistic market! So buckle up and enjoy this instance ;)

? About

> Note! All information on this instance as any other does not provide any new information that is not already out there in some shape or form. On top of that, LLM's and AI agents can provide you with the exact instructions on how to setup or do basically anything. However, one soon figures out that if you have no background knowledge, don't know what to watch out for or search for that it gets quite hard for you to learn anything of substance. Prompt: "Teach me quantum mechanics" simply provides you with a summary of what quantum mechanics entails it does not teach you the course obviously. Now, not exactly similar but we try to do something similar on these instances. It is intended to collect information on a global digital commons topics and view them in a human readable and educational form.

> Finally, these instances are also created to create human communities and keep the so called human in the loop. Even if in the near term future AI can setup equivalent educational websites than this will still be based on data that we humans provided somewhere on the internet. These Bookstack and Peertube instances are community instances that are constantly updated with new input of how us humans understand the digital world. Hence, this is likely here to stay as a place that keeps track of the truth as far as we know it ;). New inputs constantly, need to be judged by humans to check if we understand what is going on under the hood for safety purposes.

The purpose of this Bookstack instance is to expose the hardware companies that basically run the whole technology industry.
